

# APPLIED BIOACOUSTICS IN CONSERVATION AND PRACTICE

In collaboration with the Organization for Tropical Studies  
and the African Bioacoustics Community

**African Bioacoustics  
Community**

# APPLIED BIOACOUSTICS

## IN CONSERVATION AND PRACTICE

This hands-on course provides an exploration of bioacoustics within terrestrial ecosystems, equipping participants with the essential skills and knowledge to apply acoustic methodologies in ecological research and conservation activities.

The course is tailored to graduate students, researchers, and conservation practitioners. It covers both theoretical foundations and practical techniques necessary for field recording, sound-based biodiversity monitoring and ecosystem assessment in biodiverse terrestrial systems. Special emphasis is placed on practical, real-world applications in Africa's rich ecosystems.

### WHERE

The course will be run from the Skukuza Research Station (home of the Skukuza Science Leadership Initiative). The station is located within the iconic Kruger National Park in South Africa, one of Africa's premier conservation areas.

### WHEN

From 6 July 2025 to  
19 July 2025
